

Alfa Laval LKB and LKB-F

Butterfly valves

Introduction

The Alfa Laval LKB Butterfly Valve is a reliable, hygienic in-line valve for routing low and medium-viscosity liquids in stainless steel pipe systems due to its substantial opening area and low flow resistance. The LKB is available with a standard handle with spring-locking action for straightforward manual operation or with a pneumatic actuator for pneumatic operation.

Application

This hygienic valve is designed for on-off duties with low to medium-viscosity liquids in hygienic applications across the dairy, food, beverage, brewery and many other industries.

Benefits

- Versatile, highly modular, hygienic design
- Reliable, cost-effective performance
- Easy to configure in either a manual version or a pneumatic version

Standard design

The LKB Butterfly Valve consists of two valve body halves, valve disc, and bushings for the disc stem and a seal ring. These components are assembled by means of screws and nuts. The valve comes with standard weld ends but can also be supplied with fittings. The valve can also be fitted with the Alfa Laval ThinkTop® V50 and V70 for sensing and control of the valve.

The valve is available in these dimension standards: the LKB for ISO and the LKB-2 for DIN tubes. The LKB is also available in a flange version, the LKB-F, with two flanges and two flange seal rings for easy removal of the valve body without dismantling further piping setups.

The actuator is available in two versions, the LKLA and the LKLA-T (T for mounting of an indication or control unit on the actuator) and in two sizes, Ø85 mm and Ø133 mm, to cover all valve requirements. The actuator is fitted onto the valve using a bracket and screws. A handle for manual operation is fitted onto the valve by means of a cap/block system and a screw.

Working principle

The Alfa Laval LKB Butterfly Valve can be operated either by means of a pneumatic actuator from a remote location or manually operated by means of a handle. The actuator comes

in three standard versions: normally closed (NC); normally open (NO); and, air/air activated (A/A).

For pneumatic operation, an actuator converts axial piston motion into a 90° rotation of the shaft. The actuator torque increases as the valve disc comes into contact with the seal ring of the butterfly valve to secure proper closing of the valve seat.

For manual operation, a handle mechanically locks the valve in open or closed position. Two-position, four-position, regulating 90°-position, and multi-position handles are available. Manual valves can also be mounted with indication units for feedback on the valve position (open/closed).

Options

- Male parts or clamp liners in accordance with required standard.
- ThinkTop® for control and indication.¹
- Indication unit with micro switches.¹
- Indication unit with inductive proximity switches.¹
- Indication unit with Hall proximity switches.¹
- Explosion proof indication unit with inductive proximity switches.¹
- Bracket for actuator. (Also for ball valves).
- Handle with two or four positions (standard on DN125 and DN150).
- Handle for electrical position indication.
- Handle with infinite intermediate positions (not for DN125 and DN150).
- Multipositioning handle².
- Lockable Multiposition Handle. Padlock can be mounted as shown in fig. 3. Note! Padlock is not delivered.
- Special cap for 90° turned handle position.
- Service tool for actuator.
- Service tool for fitting 25-38 mm (DN25 DN40) valve discs.

Note! For further details, see also ESE02446.

¹ For further information see Product Catalogue chapter "Control & Indication".

² **Note!** A padlock can be mounted on the Lockable Multiposition. Handle as shown in the opposite figure. Padlock is not delivered.

The Safe Choice

Alfa Laval LKC-2 Non-return Valve

Concer

Non-return valve LKC-2 is designed for use in stainless steel pipe installations to prevent reverse flow.

Working principle

LKC-2 opens when the pressure below the valve plug exceeds the pressure above the plug and the spring force.

The valve closes when pressure equalization has been achieved. A higher counter pressure will press the valve plug against the seat.

Standard Design

The valve body is in two parts, assembled by means of a clamp ring and hygienically sealed with a special seal ring. A guide disc and four legs guide the spring loaded valve plug with an O-ring seal.

The valve is available with welding ends for tubes according to ISO and DIN 11850

TECHNICAL DATA

Temperature

Pressure

Max. product pressure: 1000 kPa (10 bar)

Mechanical

Required differential pressure for opening the valve when fitted in a vertical pipe, as shown in fig. 3, is approx. 6 kPa (0.06 bar)

Options

Product wetted seal rings of Nitrile (NBR) or Fluorinated rubber (FPM).

2.3

The Safe Choice For High Purity Applications

Alfa Laval LKC UltraPure Non-return Valve

Concept

LKC is a non-return valve preventing reverse flow in a system. The UltraPure execution is designed and documented to meet the demand in industries like BioPharm and Personal Care.

Working principle

The spring acts on the valve plug and keeps the valve closed until the force from the pressure in the inlet exceeds the force of the spring. If a reverse flow should occur the spring force and the pressure from the outlet will keep the valve closed.

Standard Design

The valve body is made in two parts that are assembled with a clamp ring. A guide disc and four legs guide the spring loaded valve plug in the valve body.

TECHNICAL DATA

Max. product pressure: 1000 kPa (10 bar) Required differential pressure for opening the valve when fitted in a vertical pipe, as shown in fig. 2, is approx. 6 kPa (0.06 bar).

Alfa Laval ThinkTop V50 and V70

Sensing and control

Introduction

ThinkTop V50 and V70 takes valve control to a new level and all these new features are available on any Alfa Laval diaphragm, butterfly, single-seat and mixproof valves. While helping to increase production performance and secure traceability, ThinkTop V50 and V70 provide real-time information on the valve's operating status 24/7.

Both ThinkTop V50 and V70 are interchangeable with prior ThinkTop versions, and the appropriate variant is selected based on the number of solenoid valves. With only one sensor target and included adapter, ThinkTop V50 and V70 are easily retrofittable to existing Alfa Laval valves.

ThinkTop V50 and V70 come fitted with features such as Auto Setup, Live Setup and Flex Setup that streamline the setup process, making it quick and easy. Auto Setup and Live Setup recognise the valve based on its DNA profile and can complete the valve setup without any manual interaction.

The burst seat clean function is available on ThinkTop V70 and pulse seat clean function available on both ThinkTop V50 and V70. These valve position-based functions controls the optimum seat clean sequence of the valve, making it possible to save CIP time and achieve up to 95% CIP liquid savings for each seat clean.

Application

ThinkTop V50 and V70 are designed for use in the dairy, food, beverage, and biopharma industries.

Benefits

- Auto setup
- Automatic valve recognition
- Automatic selection of tolerance band
- Fast, Live and Flex Setup
- 360-degree LED indication
- Burst seat clean
- Pulse seat clean
- Exchangeable (threaded) air-fittings
- Interchangeable with ThinkTop classics

Certificates

A selection of the essential certificates available on ThinkTop

Working principles

The control unit offers a single sensor solution for diaphragm, butterfly, single-seat and mixproof valves and it can be fitted with up to three solenoid valves. ThinkTop converts the electrical PLC output signals into mechanical energy to energise, or de-energise, the air-operated valve, using the physical sensor target mounted on the valve stem.

Installation with Auto Setup or Live Setup is intuitive and fast. To initiate Auto Setup, simply press the "SELECT" button and then the "ENTER" button to begin the setup sequence. The ThinkTop automatically recognizes the type of valve and completes the programming sequence fast and efficiently. Alternatively, the ThinkTop can be set up, without dismantling the control head, using the built-in Live Setup feature for remote-configuration.

Steel parts	1,4301 / 304
Gaskets	Nitril / NBR
Air fittings	Nickel plated / Nylon PA6
M12 chassis connector	Stainless steel / Gold plated pins

Environment	
Working temperature	-10°C to +60°C
Protection class (IP)	IP69K
Protection class (NEMA)	4, 4X and 6
Hazardous area	ATEX and IECEx in preperation

Control board	
Communication	See interfaces section
Sensor accuracy	± 0,1 mm
V50 - Valve stem length	Below < 65 mm
V70 - Valve stem length	Above > 65 mm
Mean Time To Failure (MTTF)	224 years
Approvals	UL/CSA Certificate: E174191

Solenoid valve	
Supply voltage	24 VDC ± 10%
Nominal power	0,3 W
Air supply	300-800 kPa (3-8 bar)
Type of solenoids	3/2-ways or 5/2-way
Number of solenoids	0-3
Manual hold override	Yes
Air quality	Class 3,3,3 acc. DIN ISO 8573-1
Air pressure	6-8 bar

Solenoid valve	
B10 data	5 million cycles
Recommendation	Operate once a month to prevent dry-out
Note! Throughout this leaflet, SV is used as an ab	obreviation for a soleniod valve
Air fitting	
Threaded air fitting G1/8	ø6 mm (Rim blue) or 1/4" (Rim Grey)
Elbow push-in fittings	ø6 mm (Rim blue) or 1/4" (Rim Grey)
Cable connection	
Main cable gland entry Digital	M16 (ø4 - ø10 mm²) (0,16" - 0,39")
Main cable gland entry AS-I	M16 (ø2 - ø7 mm²) (0,08" - 0,28")
Seat lift sensor cable gland entry	M12 (ø3,5 - ø7 mm²) (0,14" - 0,28")
Max wire diameter	0,75 mm ² (AWG20)
M12 chassis connector	
AS-Interface V50/V70	2 wire, 4-pin series
IO-Link interface V50/V70	3 wire, 4-pin series
Digital interface V50	6 wire, 8-pin series
Digital interface V70	10 wire, 12-pin series
Vibration	
Vibration	18 Hz-1kHz @ 7,54g RMS
Shock	100g
Humidity	
Constant humidity	+40°C, 21 days, 93% R.H.
Cyclic humidity	-25°C/+55°C, 12 cycles
Working	93% R.H.
Accessories by functionality	
Upper seat lift surveillance	Kit
Valve "opening" speed reduction	0-100%. Outlet air fitting on ThinkTop
Valve "closing" speed reduction	0-100%. Inlet air fitting on actuator
Valve closing speed increase	Quick air exhaust, ø6 mm

OPERATIONAL DATA

ThinkTop LED indication

ThinkTop features a 360-degree light guide. When the sensor target is within the respective setup position band, the corresponding colour lights up.

Valve position						
ThinkTop Mode	Actuator	All De-energised	Main valve open Energised	Upper seat lift Energised	Lower seat push Energised	Between
	Factory setting	Green flashing	White flashing	Blue flashing	Yellow flashing	Off
	Operation	Green	White	Blue	Yellow	Off
	Not OK	Green/red	White/red	Blue/red flashing	Vallayy/rad floobing	Red flashing
		flashing	fl ashing		Yellow/red flashing	ned liashing

Auto and Live setup

Auto Setup is a rule-based function. If one of these rules are not present, Flex Setup must be used.

By default, ThinkTop V50 and V70 uses the de-Energised/Energised paradigm for valve positions feedback.

Parameter	Auto Setup/Live Setup	Flex Setup (retrofit mode)
Status feedback (OK or error)	Valve state (Fail safe signal)	Status error
Seat cleaning function	Enabled	Disabled
Valve operation monitor	Enabled	Disabled
Ext. sensor operation monitor	Enabled	Disabled
Interlock	Enabled	Disabled
Output (AS-i master input)	Special	Special
External sensor masking	Enabled	Disabled

Note!

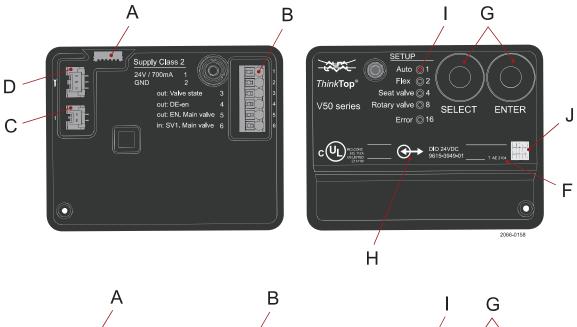

The "Fail safe signal" is always high for idle operation of ThinkTop and the valve

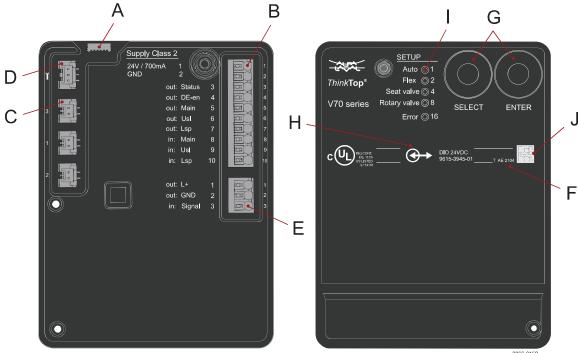

Valve compatibility chart

Use Anytime configurator for correct selection of ThinkTop V50 and V70 on different valve size and types

	Common applications (Auto / Live Setup)	Special applications Incompatible (Flex Setup) valves
ThinkTop V50	Single Seat valves Small Single Seat valve Butterfly valves Diaphragm valves Ball valves Shutter valves Double seat valves Double seat valve	ThinkTop classic retrofit mode or alternative setup with no restrictions Feedback structure such as the open/closed valve feedback All SSV (1/2" - 4") NO, shut off, maintainable, need to be setup as a rotary valve Valves without actuator stem and mushrooms Koltek Type 633 three position actuator, valve size 1" – 3" Regulating valves
ThinkTop V70	In addition to the ThinkTop V50 valves Double seat valves Double seal valve Long stroke single seat valves Diaphragm valves Air/Air valves	 Application with no solenoid valve, feedback indication only One control unit to control multiple valves-actuators SMP-BC where using 2 solenoid valves to operate main valve and pilot leak-detect valves independently Safety valves Sample valves SMP-EC 700 series Other valve brands

Overview of control board V50 and V70

- A: LED indication lamp

- C: Solenoid valve connectors
- D: Diagnostic port (Alfa Laval)
- E: Upper seat lift sensor terminal
- F: Control board Firmware version
- G: Push buttons "Select" and "Enter"
- H: Symbol for electrical interface
- I: LEDs for unit status display
- J: Non-public QR code

ThinkTop and automated valve-seat cleaning

The standard features Burst seat clean and Pulse seat clean makes it easy to optimize the water consumption during CIP cleaning of the gaskets in Mixproof valves and drain valves.

Information on how to handle pulse seat clean and burst seat clean can be found in the instruction manual, AS-Interface table and in the IO-Link IODD interface description.

Feature availability table

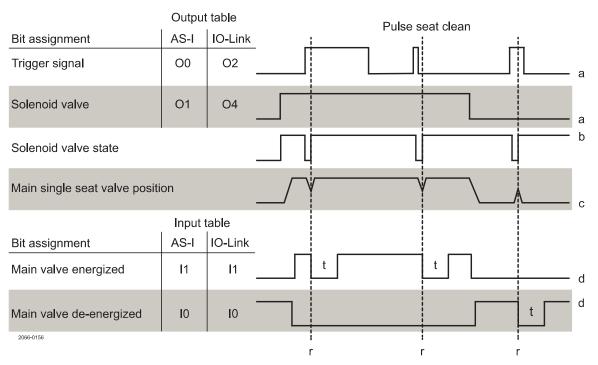

This table shows in which ThinkTop configurations the features are available and if they can be controlled from the PLC.

ThinkTop	Interface	Feature	Availability	
V50 and V70	Digital	Pulse clean	Feature not available	
V70	Digital	Burst clean	2 or 3 solenoid valves - Manual setup	
V50 and V70	—AS-Interface	Pulse clean	1 solenoid valve - PLC controlled function	
V70 AS-Interface		Burst clean	2 or 3 solenoid valves - Manual setup or PLC controlled mode	
V50 and V70	—IO-Link	Pulse clean	1 solenoid valve – PLC controlled function	
V70	70 IO-LINK		2 or 3 solenoid valves - Manual setup or PLC controlled mode	

ThinkTop pulse seat clean

Intended for high CIP flow pressure and for single seat valves or butterfly valves used as drain valves. No setup required, pulse seat clean is a standard and ready to perform feature in ThinkTop V50 and V70 with one solenoid valve.

How to PLC control the pulse cleaning function, please set up and follow the function diagram. The PLC input duration (a) to the ThinkTop must be at least 500 ms.

- a: Electrical signal from PLC
- b: Air output from ThinkTop
- c: Physical valve movement
- d: Visual LED and electrical signal to PLC
- r: Valve position reached
- t: 2 sec.

When the valve-position is reached, the pulse seat clean function is released, and the valve returns to the starting position. After which then ready again after 2 seconds to perform another pulse seat clean. A two-second (t) electrical signal and visual feedback (d) is provided as a handshake for successful completion of a pulse seat clean.

Pulse water consumption graph

ThinkTop V50 and V70 CIP water consumption during pulse seat clean on different sizes of drain valves, provided with 6 bar air pressure to the actuator:

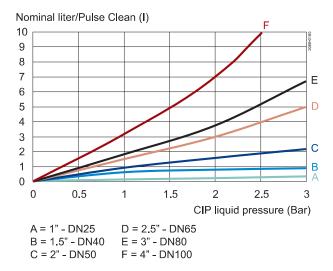

Figure 1. LKAT-T ø85 and Butterfly valves 1" DN25 to 4" DN100 Air pressure 6 bar

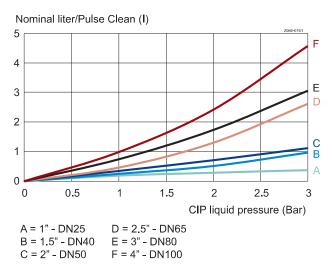

Figure 2. Unique SSV valves 1" DN25 to 4" DN100 Air pressure 6 bar

ThinkTop burst seat clean

For efficient cleaning of the gaskets in a Mixproof valve during pressurized CIP flow. The burst clean mode is disabled as default and can be enabled either locally on the ThinkTop or remotely from the control system. The feature is available in ThinkTops configured with two or three solenoid valves.

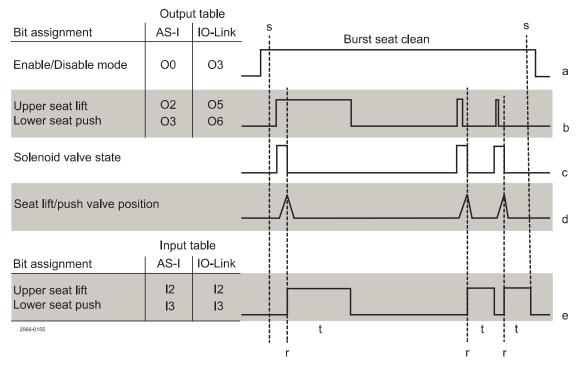

For manual push-button setup, burst seat clean feature can be enabled or disabled on the ThinkTop V70 control board by doing the following. Press "SELECT" (4 times) until LED # 4 flashes, then press 'ENTER' to activate or deactivate the function.

For remotely PLC control of the burst clean mode please refer to the bit table of AS-Interface and IO-Link or the function diagram. With PLC control, the burst clean mode can easily alternate between high CIP flow pressure or CIP gravity cleaning.

When the PLC burst clean mode bit goes "high", the burst seat clean function is enabled, leaving the setting locked and cannot be switched locally or from the HMI system. When the PLC burst clean mode bit goes "low" the function is disabled. While the PLC input is low the mode can be toggled locally on the ThinkTop.

If ThinkTop V70 is set up using Auto Setup without the upper seat lift sensor, the function uses the stored setup stroke time for "Lower seat push" plus 1 second extra for when the solenoid valve is deactivated.

How to control the burst cleaning function, please set up and follow the function diagram. The PLC input duration (b) to ThinkTop must be at least 500 ms.

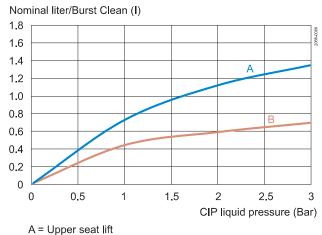

- a: Push button or electrical signal from PLC
- b: Electrical signal from PLC
- c: Electrical activation inside ThinkTop
- d: Physical valve movement
- e: Visual LED and electrical signal to PLC
- r: Valve position reached
- s: Signal high during Burst seat cleaning
- t: Min. 2 sec.

When the valve-position is reached, the burst seat clean function is released, and the valve returns to the starting position. After which then ready again after 2 seconds to perform another burst cleaning. A minimum two-second (t) electrical signal and visual feedback (e) is provided as a handshake for successful completion of a burst seat clean.

Burst water consumption graph

ThinkTop V70 CIP water consumption during Burst seat clean on different Mixproof valves, provided with 6 bar air pressure:

B = Lower seat push

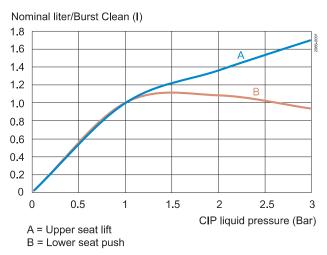

Figure 5. Unique Mixproof valve / Unique CP-3 Mixproof valve Figure 5. 4" DN100 Air pressure 6 bar

Compatible valve actuators

List of compatible valve actuators where pulse seat clean and burst seat clean can be applied

ThinkTop V50 and V70	Valve actuators	Applicable
	iSeries	Yes
	Single Seat Valves	Yes
	Butterfly Valves - LKLA-T ø85	Yes
	Butterfly Valves - LKLA-T ø133	No
Pulse seat clean	Diaphragm valves	No
	Ball valves	No
	Shutter valves	No
	Small Single Seat Valves	No
	Safety and Sample valves	No

ThinkTop 70	Valve actuators	Applicable
	Air/Air valves	Yes
	700 series	No
	2 Step valves	No
	Long stroke valves	Yes
Burst seat clean	Double seat valves	Yes
burst seat dearr	Double seal valves	No

Valve state - Fail safe signal

The following table gives an overview of behaviour per Error condition where the valve state signal goes low. Further description of the various Error conditions can be found in the ThinkTop Instruction Manual, section 5,2

Valve state is a decentralized functionality, available for all ThinkTop variants and a feature that can be used for monitoring process issues or to ease and simplify the PLC programming of a valve surveillance.

		ThinkTop Digital Valve state	ThinkTop AS-Interface Valve state not available	ThinkTop IO-Link Valve state
Error Code #	Error description	Main valve FAIL SAFE SIGNAL DE-ENERGIZED SIGNAL behaviour	Main valve not available DE-ENERGIZED SIGNAL behaviour	Main valve FAIL SAFE SIGNAL DE-ENERGIZED SIGNAL behaviour

Lower seat in closed position					
LSP SV3 active (O3)					
Lower seat in seat push position	0	0	0	1	1
Upper seat in closed position					

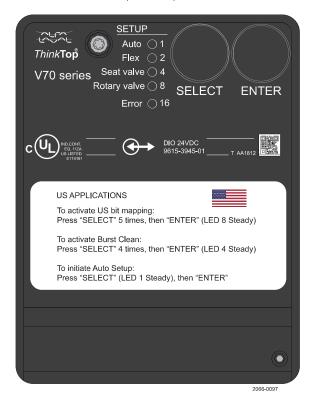

USA compliance option

Available to all ThinkTop V70 variants. The USA compliance option refers to a bit mapping interface used in the USA on Mixproof valves, fitted with 3 solenoid valves. This USA bitmapping can be enabled after or before auto setup.

US regulations require independent closed position feedback signals for upper seat lift and lower seat push in a Mixproof valve application

The USA bitmapping are enabled or disabled on the ThinkTop V70 control board. Press "SELECT" (5 times) until LED no 8 flashes, and then press 'ENTER" to enable or disable. This option is also available as an adjustable IO-Link parameter.

The USA compliance option is from factory disabled by default. However, if it is enabled and there is a manual reset to factory default, the USA compliance option remains enabled.

USA bitmapping

The information in the table is based on the following setup:

- ThinkTop V70 with 3 solenoid valves
- IFT series seat lift sensor of type NO or NC
- Mixproof valve with both seats installed (balanced or unbalanced upper plug)
- Any combination of above valve type and sensor type

	DE-EN (I0) Both closed	MAIN (I1) open	USL (I2) closed	LSP (I3) closed	Valve state (Fail safe signal)
DE-EN (No active SV)

IO-Link interface

ThinkTop IO-Link

In addition to process indication and control, the IO-Link variant enables diagnostic information and features additional functionality that is unique to ThinkTop.

If new functionality is implemented in ThinkTopV50 and V70, then a new IODD and interface description is generated. Both the new and old IODD will be included in the revision of the "ThinkTop IO-Link zip-file".

It's recommended to just add them all to the preferred IO-Link configuration tool. The configuration tool will automatically match the correct IODD with the connected ThinkTop.

Device name	ThinkTop V50 IOL ThinkTop V70 IOL

IO-Link data table

For the IO-Link version, the bit assignment and diagnostic data can be found in the manual "IO-Link Interface Description" for ThinkTop V50 and ThinkTop V70 respectively. Go to www.alfalaval.com ThinkTop V and documentation

On ThinkTop V50 and ThinkTop V70 control board, using the IO-Link interface tool from IFM, all parameter settings and visualisation data are available through the diagnostic connection port

From the "IO-Link Interface Description" the table below shows an overview of the data storage parameters. When replacing a ThinkTop V-series on a process plant, some data are re-stored, included in the new ThinkTop V-series, and other data must be reassigned again, excluded in the new ThinkTop V-series.

Please note that data storage is a feature that must be actively selected in the PLC's hardware configuration when setting up the IO-link master.
